QP CODE: UGH/MOD/13/10/26

Roll No : .....

MAR AUGUSTHINOSE COLLEGE, RAMAPURAM

MGU- BCA (HONOURS) DEGREE MODEL EXAMINATION, OCTOBER 2026

Third Semester

Skill Enhancement Course (SEC) - MG3SECBCA200 - PYTHON PROGRAMMING

Maximum Marks: 50 Duration: 1.5 Hours

[Remember (K), Understand (U), Apply (A), Analyse (An)]

Part A

Very Short Answer Questions. Answer All Questions. Each question carries 2 marks

1. What is the difference between a statement and an expression in Python. [U][1]
2. Write the syntax of a lambda function. Construct a lambda function to add two numbers. [A][2]
3. Why exception hierarchy is important in Python? [A][2]
4. Identify the operator that has higher precedence: `()` or `==`. [U][1]
5. Write a Python program where a tuple of integers is passed to a function that calculates and returns the sum of all elements [A][2]
6. Explain Tuple packing and unpacking with an example. [U][2]
7. Write down the statement to extract the first 5 characters of "MyPythonWorld". [U][1]
8. What is the purpose of the `assert` statement? [U][2]
9. Discuss the syntax of `for` loop in Python with an example [K][1]
10. State the use of pickle module in Python. [K][3]

[2x10=20]

Part B

*Short Answer Questions. Answer **any three** questions. Each question carries 5 marks.*

11. Write a program to check whether a number is prime or not. [A][1]
12. State and explain any five list functions with example. [K][2]
13. Write a program that reads a text file and analyzes the frequency of each alphabet letter (a-z) [U][3]
14. Describe the NumPy module in Python. Explain any four commonly used NumPy functions with suitable examples. [U][2]
15. Explain exception handling using `try/except` statement in detail. [A][3]

[5x3=15]

Part C

*Essay Questions. Answer **any one** question. Each question carries **15** marks.*

16. Describe the history and application areas of Python in detail. [U][1]
17. Write a program to design a mini calculator using a user-defined function that supports addition, subtraction, multiplication, and division. Make use of a default parameter for the operator. Demonstrate different function calls and outputs. [U][2]

[15x1=15]
